

## Home & Yard

The Home & yard receiver has the ability to receive a signal from multiple sensors, then alerts you, the home owner, to which zoned area the triggered sensor is located, by bringing on the appropriate indicator light and sounding the particular audible tone for that zone.

## Pager Unit

Fantastic new product to use in conjunction with your existing or new Gate Alert. Put it in your pocket whilst out and about on your property to be instantly alerted when you are approximately 750mtrs away from the base/receiver.

## Range Extension Options

Aerial units 1.5km or 3+km

Unique to Agtronic Alerts is the ability to cover greater distances using our NZ designed and made external aerials. This is beneficial not only for distances but to also overcome obstacles blocking the line of sight, for example trees & buildings, making the Gate Alert the most reliable and cost effective unit on the market.

## Add Ons
