

# INTRUDERS BEWARE

# GATE ALERT IS HERE

### Sensor Transmitter Unit

A compact design (10x8x3 cm). The green unit is easily concealed and is usually screwed to a post, tree or building. It is fully waterproof. The infrared sensor will detect any person or vehicle passing within 20 metres, triggering a coded radio signal to the base/receiver unit at the house up to 300mtrs away.

### Infra Alert Standard Receiver

The receiver unit is compact (11x9x3 cm), and operates on mains power or 12volt battery. A volume control allows a suitable alert tone level to be heard throughout the house. The alert tone self cancels after 6 seconds or can be manually cancelled.

### Range Extensions

Aerial units with ranges up to 1.5km or 3+km are also available.

## Welcome to the Agtronic InfraAlert System

The problem of monitoring distant gateways has been solved with this revolutionary wireless security system. A compact remote sensor/transmitter unit uses an infrared sensor to detect people and vehicles. It then transmits a coded UHF signal up to 300 metres to the house receiver unit, activating an alert tone with variable volume.

### Ideal for

- Entrances
- Workshops
- Driveways
- Wineries/Orchards Horticulturist
- Outbuildings
- Bed & Breakfasts/Hotels/Motels
- Machinery Yards
- Home Businesses
- Remote Gateways
